

API Endpoints

- Auth and profiles
 - POST /api/v1/auth/signup - create an account
 - POST /api/v1/auth/login - log in, returns a token
 - GET /api/v1/profiles - list profiles
 - POST /api/v1/profiles - add a profile
- Browse and search
 - GET /api/v1/home - dashboard rows and recommendations
 - GET /api/v1/search?q={query} - search titles, cast and genres
 - GET /api/v1/content/{contentId} - details for one title
- Playback
 - POST /api/v1/playback - start a session, returns a signed manifest URL
 - POST /api/v1/playback/progress - update watch progress
- User data
 - GET /api/v1/history - watch history and continue watching
 - GET /api/v1/my-list - saved titles
 - POST /api/v1/my-list/{contentId} - add or remove a title
 - GET /api/v1/subscription - current plan and status
 - POST /api/v1/subscription - subscribe or change plan
- Conventions
 - Bearer token in the Authorization header on every call.
 - 200 ok, 201 created, 202 progress queued, 401 bad token, 403 region blocked or stream limit reached, 429 rate limited.
 - Cursor based pagination, so new titles do not shift rows while scrolling.
 - Payment calls carry a reference so a retry replays the response instead of charging again.
